

# David Idowu

## Data Analyst

✉ davididowu172@gmail.com ☎ 07449816627 📍 Manchester, United Kingdom

### PROFILE

---

I am a determined professional who learns quickly and adapts to new situations. Experienced in designing and building robust data pipelines, analysing complex datasets using Python and SQL and creating compelling visualisations in Tableau and Excel to drive informed decision-making and solve business challenges. These projects provided valuable industry insights and prepared me for future professional challenges. I am a confident, direct, enthusiastic individual who prioritises teamwork, collaboration, and delivering high-quality results.

### WORK EXPERIENCE

---

#### Operations Customer Expert, Teleperformance

07/2023 – present

- Promptly handled an average of 45 customer inquiries and complaints per day with a 96% customer satisfaction rate
- Maintained a knowledge base of the evolving product offerings, and improved customer retention by 9% by proactively recommending new products to existing customers
- Documented customer interactions to reduce on-boarding time by 15% when new customer service representatives interact with customers
- Maintained up-to-date customer records in Salesforce while interacting with customers across email, phone, and social media
- Increased average customer order size for new customers by 14% by understanding needs and recommending the right products.

#### Frontend Developer(Contract), Fashion AI

05/2023 – 11/2023

- Employed HTML, CSS, JavaScript, TypeScript, and frameworks like React, Angular, and Vue to architect and engineer web applications, yielding a 20% boost in user engagement.
- Ensured web applications exhibited responsiveness, resulting in a 15% reduction in bounce rates and heightened user satisfaction.
- Executed thorough testing across a spectrum of devices, yielding a 10% enhancement in cross-platform usability.
- Attained a flawless 100% success rate in timely feature launches through robust collaboration with senior team members.
- Engineered MongoDB database schemas, accelerating data retrieval speed by 30% and slashing query response times by 25%

#### Software Engineer - Intern, Volab Consulting Limited

08/2017 – 04/2019

- Wrote and developed new and well-tested code for different software projects.
- Worked closely with other team members to identify and remove software bugs.
- Streamlined interfaces between hardware and software to enhance usability.
- Amended existing software to upgrade interfaces and elevate performance.
- Worked with developers to construct algorithms and flowcharts.
- Designed layout and graphics to enhance the aesthetics and appearance of the website.
- Troubleshoot websites website on different browsers to determine quality.
- Handled special projects designated by senior developers.

### EDUCATION

---

#### MSc Management with Data Analytics, BPP University

11/2024 – 05/2026

- Developed leadership and management skills tailored to the digital age.
- Applied practical data tools and analytical techniques to support business decision-making.
- Covered core modules such as Customer Experience Strategy, Data-Driven Decision Making, Programming for Data Analytics, and Business Consultancy Project.

Manchester, United Kingdom

- Gained competencies in interpreting, visualising and communicating insights from complex datasets.
- Optionally completed Professional Development Planning (PDP) with employability workshops and industry exposure

### **BSc Information Technology and Business Information Systems (Top Up),**

*Middlesex University*

01/2022 – 09/2022  
London, United Kingdom

Core modules covered include:

Strategic Information (Enterprise Management) Systems: Covers SDLC in the Agile Development Framework.

User Experience (UX) Design: Conceptualising, researching, and developing an E-Commerce.

Business Intelligence: Includes working with data warehouses and Big Data, analysing and cleaning data in Excel, visualising data in Tableau, and mining data with Weka.

Undergraduate Project: Developed a Healthcare Documentation Application used to manage and organise the various aspects of a healthcare organisation, such as patient information, electronic medical records, financial data, scheduling, and more.

### **Advanced Diploma Software Engineering in Java, Aptech Computer Education &**

04/2019 – 06/2021

Core modules covered include HTML, CSS, Database Management (SQL Server), Object

Lagos, Nigeria

Oriented Programming (Java, C++, C#, C), Programming Principles and Techniques, UI/UX

for Responsive Design, PHP, and MySQL querying. Introduction to Cloud Computing,

Internet of Things, and the Agile System Development Life Cycle for Software Projects.

## **SKILLS**

---

### **Data & Analytics**

Python (Pandas, NumPy, Matplotlib, Seaborn, Scikit-learn), SQL, Excel (Advanced), Power BI, Tableau

### **Data Practices**

Data Cleaning & Wrangling, Exploratory Data Analysis, Data Pipeline Design, Predictive Modelling, Data Visualisation, CRISP-DM Framework

### **Cloud & Infrastructure**

Azure (IoT Hub, Data Lake, Stream Analytics, Databricks), Google Colab, Git, GitHub

### **Soft Skills**

Project Management, Critical Reasoning, Communication, Teamwork, Adaptability, Leadership

## **PROJECTS**

---

### **Starbucks**

Produced a consultancy report examining Starbucks' operational and financial challenges amid its "Back to Starbucks" turnaround strategy. Analysed secondary data including financial statements, analyst reports, and press disclosures, applying the Turnaround Strategy Lifecycle (Hofer, 1980) and the Cost–Quality Tradeoff Framework to diagnose a sharp decline in North American operating margins from 18.7% to 4.5% year-on-year. Conducted stakeholder analysis across internal and external groups, including executive leadership, store managers, investors and customers, to assess strategic impact. Delivered seven evidence-based recommendations covering flexible workforce management, phased pilot testing, technology-enabled productivity, centralised cost governance, and portfolio rationalisation to restore profitability while sustaining service quality.

### **AgriPulse CropFusion Project**

Produced a technical consultancy report, designing a cloud-based big data architecture for a global agricultural IoT platform serving 15 million farmers. Evaluated big data requirements across the 4 V's framework (Volume, Velocity, Variety, Veracity) and compared AWS, Azure, and Google Cloud solutions across scalability, real-time processing, cost, and compliance. Proposed a full Azure-based system architecture spanning IoT Hub, Data Lake Storage Gen2, Event Hubs, Stream Analytics, Databricks, and Power BI, covering data ingestion through to business intelligence visualisation. Conducted a structured risk assessment addressing security, cost escalation, data integrity, and vendor lock-in, with mitigation strategies aligned to CISO, CFO, and CRO concerns, including end-to-end encryption, RBAC, lifecycle cost policies, and multi-region failover.

**KRONIK Financial Services**

Designed and documented a Python-based data pipeline to automate loan application processing for a financial services firm experiencing 200% growth in application volumes. Using Google Colab and libraries including Pandas, NumPy, Matplotlib, Seaborn, and Scikit-learn, the solution addressed data quality challenges across PDF and Excel datasets, handling missing values, duplicates, and inconsistencies. Applied the CRISP-DM framework to structure the data analysis lifecycle, performed EDA to surface key approval patterns, and recommended predictive modelling approaches including Logistic Regression, Random Forest, and XGBoost. Implemented version control via Git and pseudocode design for cross-team maintainability.

**Aphrodite Beauty Ltd.**

Conducted a full data analytics project for a fictional beauty company operating across Austria, the Netherlands, and Portugal. Cleaned and prepared a multi-year sales dataset in Excel, identifying and resolving data quality issues, including missing values, duplicate records, and formatting errors using COUNTBLANK formulas and conditional formatting. Performed exploratory and trend analysis across monthly revenue, product categories, and country-level benchmarks (2021–2023). Produced data visualisations to assess the impact of private label manufacturing contracts and delivered strategic KPI recommendations to guide market expansion and product development decisions.
